The Periodic Table of the Elements

The Royal Society of Chemistry has produced a colourful wall chart measuring 125cm × 75cm covering the first 105 elements as they exist today. Each group is pictured against the same tinted background and each element, where possible photographed in colour and discussed with regard to its position in the hierarchy of matter. Additional information for each element includes chemical symbol, atomic number, atomic weight and orbits of electrons.

The chart is particularly useful for both teachers and students and would make a worthwhile addition to any establishment.
